

**Ventilation hygiene, testing
& remedial services.**

vmes.co.uk

Introduction.

At VMES, we specialise in ventilation hygiene, compliance testing and remedial works for commercial ventilation systems. We help organisations keep their ventilation and extraction systems safe, efficient and compliant with industry standards, fire safety requirements and insurance obligations.

Our services include inspections, TR19® cleaning, fire damper testing, AHU maintenance, remedial works, compliance reporting and certification across kitchen extract systems, laundry extract systems, air supply and extract ductwork, LEV systems and air handling units.

By reducing fire risk, improving indoor air quality and maintaining system performance, we help protect people, property and day-to-day operations.

Fire Risk Reduction

Build-up inside ducting can ignite. TR19® maintenance helps reduce fire hazards & keeps systems safe.

Air Quality Improvement

Well-maintained ductwork improves airflow and reduces airborne contaminants.

Legal Compliance

TR19® supports adherence to regulations like the Regulatory Reform (Fire Safety) Order 2005.

Keeping Systems Operating.

Compliance & Safety Standards.

Operating in any commercial or industrial environment means ensuring your ventilation systems are clean, compliant, and properly maintained is essential for safety, performance, and legal conformity.

At VMES, we provide complete ductwork support, from TR19® cleaning and compliance surveys to fire damper testing, AHU maintenance, and remedial works.

Built-up dust, grease, and contaminants can restrict airflow, create fire hazards, and reduce system efficiency. Our technicians follow BESA TR19® and BS 9999 standards to inspect, clean, test, and maintain every part of your system, ensuring long-term reliability and compliance.

BESA TR19® Guidelines

All cleaning and survey work is carried out in accordance with the recognised TR19® standard, helping maintain clean, safe and compliant air supply, extract, LEV and laundry ventilation systems.

Insurance-Approved Documentation

Following every visit, we provide a comprehensive report detailing our findings, results, recommendations and any applicable certification to support ongoing compliance.

System Access & Remedial Works

Where defects or access issues are identified, we carry out remedial works including access panel installation, component replacement and fire damper remedials to restore safe access and support ongoing compliance.

BS 9999 Standards

Every fire damper inspection includes a detailed report containing asset locations, test results, photographic evidence and compliance recommendations in line with BS 9999.

Health & Air Quality Standards

Well-maintained ventilation systems help reduce contamination, improve indoor air quality and support a safer, healthier environment while meeting ongoing compliance requirements.

Certified Technicians

All works are completed by qualified engineers, with comprehensive RAMS, method statements and compliance documentation provided as standard, ensuring every project is delivered safely and professionally.

What's Included.

Ductwork cleaning and maintenance goes beyond meeting obligations. It protects people, property, and building performance. Our approach is built around safety, compliance, and longterm system reliability, not just surface-level cleaning.

When you choose VMES, you receive more than a service visit. You gain a team who understands the regulations, works to industry best practice, and provides full certification and evidence for your compliance records.

Full inspection of ductwork, risers, and fans.

Contamination or performance level testing (where applicable).

Risk assessments and method statements (RAMS).

Protection of all work areas and surrounding equipment.

Cleaning, maintenance or remedial works as required.

Installation of new access hatches (if required).

Cleaning of hard-to-reach and concealed duct areas.

Before-and-after photographs as part of your report.

TR19®-compliant documentation and certification.

Flexible scheduling to fit around your business hours.

From the initial inspection to final reporting, every accessible part of the system is assessed and serviced as required. Hard-to-reach areas are accessed properly, and all works are scheduled to minimise disruption to your operations.

Comprehensive Coverage.

Insurance & Compliance Protection.

Reporting & Ongoing Support.

Once your service is complete, we provide a detailed compliance report covering all works carried out across the system. Each report is clear, easy to understand, and fully aligned with BESA TR19® guidance, giving you documented evidence for insurers, auditors, and safety assessors, and full confidence in your ongoing compliance.

Before-and-after photographic evidence of all works carried out.

Recorded measurements or test results (where applicable).

A breakdown of work carried out across each part of the system.

Confirmation of any repairs, replacements, or access upgrades completed.

Compliance documentation and certification for insurance or audit records.

Support That Doesn't Stop After the Clean

Our team can support you with ongoing maintenance, scheduled TR19® cleans, system inspections, and remedial works whenever required. We'll help you build a maintenance plan that suits your site and keeps you compliant all year round. Whether you manage a single building or multiple locations, we make ductwork compliance simple, reliable, and hassle-free.

Friendly support whenever you need advice.

Tailored maintenance schedules to suit your system setup.

Reminder services for future cleans.

Emergency call-outs if urgent cleaning is required.

Ongoing access to your reports and certification.

Getting Started.

Whether you need a one-off clean or a regular maintenance schedule, getting started is simple. Our team will guide you from first enquiry through to inspection, works, and certification.

We take time to understand your system, assess access, and plan around your operations to minimise disruption. No pressure, just clear advice and dependable service.

We support organisations across all sectors, including kitchens, healthcare, education, offices, and industrial sites, helping you keep your ventilation systems safe, efficient, and compliant.
